

TECH DAY.

Saturday 7th December, 2024.

Meeting time was 11.00 a.m. at 63 Bay St. Botany at the premises of well-known club member, aptly named Alex's Autos.

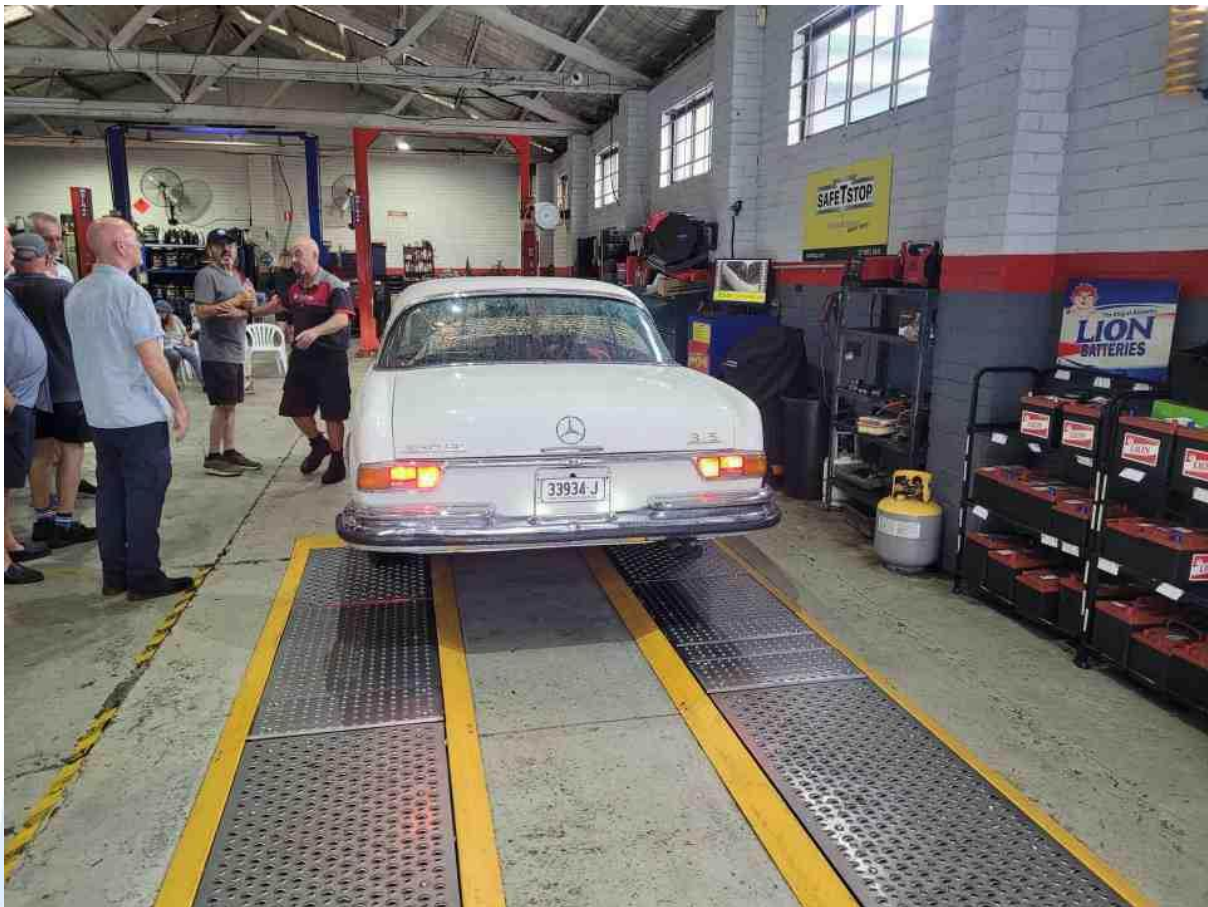

The purpose of this catch up was to inspect a new bit of motoring diagnostic gear, called 'Safety Stop'.

This equipment is 'state of the art' stuff and can provide data on many a vehicle's running gear etc...amazing!

We were given a demo using the major's Mercedes coup and learnt about the way each wheel was

functioning and in the process the brake balance and

handbrake capabilities, and even if there was a need for a wheel alignment...truly amazing stuff.

Even the suspension was measured and settings were discussed for the best set up for superior road holding...it can even tell us the weight of any vehicle!

All in all a very informative day enjoyed by 20 odd members followed by the obligatory BBQ!
Once again, thanks Mark.

Writer of the day: Phil.
